Secure Computing® is a global leader in Enterprise Gateway Security solutions. Powered by our TrustedSource™ technology, our award-winning portfolio of solutions help our customers create trusted environments inside and outside their organizations.

**Webwasher SME250  
Benefits**

- **Protection for Web and mail traffic**
- **Fully integrated HTTPS scanning solution**
- **Behavior-based protection from spyware, Trojans, and other malware combined with high-end signature based anti-malware filtering engine**
- **Best protection against spyware and malware\***
- **Outbound content control for Web and mail to help with compliance regulations**
- **Reputation-based URL filter to ensure high productivity levels**
- **Blocks spam before it enters your network with connection control technology**
- **Enterprise-grade spam filter**

*\* According to an independent test comparing the detection rates of 27 anti-virus and anti-malware products, Webwasher Anti-Malware provides the industry's best\* security against spyware, day-zero, and blended threats not available with traditional anti-virus protections or stateful inspection firewalls. eWeek article "The Limits of Scanning" [http://www.securecomputing.com/pdf/246693\\_final.pdf](http://www.securecomputing.com/pdf/246693_final.pdf)*

**Webwasher SME250**

Today's dynamic Web 2.0 environment creates significant security challenges for organizations of all sizes. Protection is needed against Web-based threats and the numerous ways these threats attempt to enter and exit an organization—from Web sites and encrypted traffic to email or a combination of these methods. Solutions spawned in the Web 1.0 era will not meet the challenge. While Web 2.0 threats require all organizations and their security solutions to proactively protect all key Web protocols, most small to medium-size businesses don't have the capacity or budget to deploy the numerous point security solutions needed for adequate protection.

Webwasher SME250 appliance

Webwasher® SME250 is an all-in-one Web security appliance that offers small to medium-size organizations the proactive protection they need against both inbound and outbound threats. Using TrustedSource™ Web reputation, this SME solution provides immediate protection against unknown threats such as malware hidden in a purportedly "good" Web page, hidden in encrypted SSL traffic, hidden in email, or a blended threat using all three methods. Webwasher's in-depth security also protects organizations from outbound threats such as loss of confidential information that can leak out through email, encrypted Web mail, or other Web protocols.

# Comprehensive, Easy-to-Use Reporting

Users can view Webwasher information and reports in a number of different ways. The Security Dashboard gives instant snapshots of your Web and email traffic every time you log into the system. Administrators can instantly see how much traffic is being allowed or denied by the URL filter, the proactive scanner, or the anti-virus engine. They can also view information such as traffic volume by protocol and system data such as update status or CPU utilization.

Also included with every SME250 purchase is SmartReporter, an easy-to-use reporting solution for URL filtering. With SmartReporter, you can quickly understand how your organization is using the Web, isolate problems, document inappropriate Web activity, and tailor your filtering settings to effectively enforce your Web use policies.

You can quickly drill-down into reports for more detail and easily save templates for future use and automatic distribution. (SmartReporter requires customer supplied Linux or Windows PC.)
